

I need hot water now. Help!

Getting solar hot water is not hard at all. With Endless Solar, it's quick, easy and there are great financial rewards and rebates for acting now.

If your hot water system is failing, call us to arrange a free assessment and quote. In most cases we can replace it within 24 hours.

Rebates are easy.

Endless Solar Systems qualify for high Government rebates and incentives.

When you buy a system from us we'll even help you claim the cash for your Renewable Energy Certificates ("RECs") and help you apply for other Federal, State and Local Government rebates too.

So what's different? What makes Endless Solar a better choice?

Higher performance than other water heaters	<ul style="list-style-type: none"> • Bigger savings on your energy bills. • Works well, even when it's cold and cloudy. • Protect your home against rising energy prices.
Easy to install	<ul style="list-style-type: none"> • Endless Solar systems are lightweight, modular and easy to install. You won't need a crane or a football team of installers to put one on your roof.
Ongoing Savings	<ul style="list-style-type: none"> • The clever design of Endless Solar's hot water system means you can start saving money straight away and continue saving, without spending more.
Tank is on the ground	<ul style="list-style-type: none"> • Evacuated Tubes are sleek and look great on your roof. • Our tanks have standard fittings - easy to install fast. • Safe to install on any building; won't cause structural defects in your home.
Self cleaning	<ul style="list-style-type: none"> • Maintains optimal system performance all year round. • No climbing on your roof to wipe away grime, mould and pollution.
Suitable for ANY Australian roof	<ul style="list-style-type: none"> • Operates well in all areas of Australia. • No compromises, just hot water, all year round. • The unique design means a much longer operating life.
Naturally frost tolerant & freeze resistant	<ul style="list-style-type: none"> • Perfect for cold climates. Captures and keeps more of the sun's heat when you need it most. • Tested to the latest Australian Standards for both Hail & Freeze Resistance without the need for a heat exchanger or Glycol (AS/NZ 2712: 2007) to temperatures as low as -15 °C.
No chemicals	<ul style="list-style-type: none"> • Safe for your family and no need for regular, costly servicing.
Long warranties	<ul style="list-style-type: none"> • Our solar water heaters won't let you down in 5 years. • Endless Solar uses only the highest quality components. We offer 10 year nationwide warranties - naturally conditions apply - see our website.

Why are Endless Solar products so efficient?

Endless Solar Systems utilise the exceptional power and efficiency of Evacuated Tube technology. Evacuated Tubes are an Australian invention and are simply a better way of heating water using the sun's energy.

Endless Solar's Evacuated Tubes provide a new level of efficiency in solar hot water and deliver many advantages over old style solar heaters.

The round surface of each tube passively tracks the sun as it moves across the sky. The secret to the brilliant performance of Evacuated Tubes is the superb insulation provided by the vacuum in between their glass walls. This ensures that the sun's energy you are catching is not lost. Other systems lose heat when it's cool outside.

Evacuated Tubes are better at **catching & keeping** the sun's radiation. Tubes reflect less of the sun's energy.

Things to think about when purchasing a solar hot water system:

- 1 Efficiency:** Higher efficiency means **faster payback** and **more savings** over the life of the system.
- 2 Installation:** Look for a design that is **simple** and **easy** to install. Make sure you are **not restricted** to putting the collector **only on a north facing roof**. Check whether you need to use a crane or to reinforce your roof. Endless Solar systems do not have these limitations, are lightweight and are a dream to install.
- 3 Quality, Lifetime & Warranty:** A long lasting system will **continue to provide savings** for many years after the payback period... that's a smart investment.
- 4 Ongoing Costs and Maintenance:** Many 'flat plate' systems require regular maintenance and chemical replacement – **beware of any ongoing costs** and standard-quality materials. A cheap solar product now could mean a very expensive mistake on your roof in the future.

Savings & payback period.

Installing a solar hot water system can save a family \$300 to \$700 off their electricity bill every year.* The amount that your household will save will depend on the amount of hot water that you currently use, as well as the type of system that you choose.

What about winter? Will I still get hot water?

Winter is the true test of a solar hot water system. When it's cold and there's less of the sun's energy, you'll need a solar hot water system that is efficient enough to heat your water even when it's cloudy or raining outside.

If you want year round hot water from the sun - whatever the weather - you can rely on an Endless Solar System to deliver.

Quality Materials.

Stainless Steel Tanks

Our hot water tanks are Australian designed and made of marine-grade stainless steel. They withstand water temperatures up to 100°C and they are covered by a 10 year warranty. The outer casing of UV stabilized polymer is rust and damage resistant, highly insulated and they easily pass Australian Standards requirements for heat retention. Our tanks can be installed either inside or outside your home.

Evacuated Tube Collectors

The Hills Solar systems supplied by Endless Solar deliver significantly higher performance than traditional solar hot water systems. Our Evacuated Tube technology is naturally frost tolerant and has exceeded the AS/NZ 2712: 2007 Standards for both, Hail & Freeze Resistance without the need for a heat exchanger or Glycol. Our Evacuated Tubes are manufactured to International Quality Standards using high quality borosilicate glass and have a 10-year warranty.
